

## YUTU'S MORTAR AND PESTLE (META) SOLUTION – FOR GIBBOUS HARE TRESPASSES

Puzzle answers may be placed into the blanks to form clues with answers matching the lengths of the star strings given. Stars designate the letters of these answers as blue or yellow. Each colored arrow can have the letters to either side of it of the appropriate color jumbled together to make the name of full moon. Each calendar month is represented, with either a traditional North American or Chinese moon name (there's some softness in "traditional" names, but those used come from lists cited in multiple sources).

The initial letters of puzzle answers, once placed, spell SWAP APT MOONS. Thus, if a given month is represented in the list by its North American moon, swap in the Chinese moon for that month, and vice versa (the North American October moon is disambiguated between HARVEST and HUNTERS by the requirement for all unique items).

Circled letters, reading down the page (noting the directionality of some circles within a given row) spells the final answer FOR GIBBOUS HARE TRESPASSES.
